PROFESSIONAL SUMMARY

AI and Computer Vision Engineer with 1.5+ years of experience at Samsung AI Center Moscow, specializing in monocular depth estimation, segmentation, 3D perception, and multi-task learning. M.Sc. in Mathematics and Computer Science, with hands-on experience training ViT-L models from scratch on approximately one million synthetic samples and evaluating zero-shot performance across real and synthetic datasets. Interested in production-oriented computer vision systems; open to relocation without relocation assistance.

TECHNICAL SKILLS

Programming: Python, C/C++, SQL

ML / Computer Vision: PyTorch, NumPy, OpenCV; depth estimation, semantic / instance / panoptic segmentation, object detection, novel-view synthesis, multi-task learning, face recognition

Models & Methods: ViT-L, ResNet18, MTCNN, zero-shot evaluation, synthetic-data training

Tools: Linux, Git

Languages: Russian (native), English (B2)

PROFESSIONAL EXPERIENCE

Samsung AI Center Moscow

Dec 2024 - Present

Computer Vision Engineer

- Developed a **monocular depth estimation** model based on ViT-L and trained it from scratch on approximately 1M samples from seven synthetic datasets; achieved average zero-shot $\delta_1 > 0.95$ and **AbsRel** < 0.05 across six real and two synthetic validation datasets.
- Researched **multi-task learning** for joint monocular depth estimation and panoptic segmentation.
- Contributed to **monocular novel-view synthesis** and **3D object detection** models.
- Developed a **unified segmentation model** supporting semantic, instance, and panoptic segmentation with a shared architecture, weights, and training dataset.

RESEARCH & PROJECTS

- Master's Thesis** - Modeling of Stochastic Effects in Nonlinear Dynamical Systems. [GitHub](#)
- Face Recognition** - Built a face-recognition pipeline using an MTCNN detector and ResNet18-based classifier. [GitHub](#)
- Bachelor's Thesis** - Applied the Galerkin stochastic method to regression model analysis. [GitHub](#)
- Numerical Methods Coursework** - Investigated bistable systems using stochastic modeling of kinetic circuits. [GitHub](#)
- Deep Learning School** - Completed coursework covering computer vision and natural language processing.

EDUCATION

Bauman Moscow State Technical University

Sep 2024 - Jun 2026

Master's Degree, Mathematics and Computer Science

Bauman Moscow State Technical University

Sep 2020 - Jun 2024

Bachelor's Degree, Mathematics and Computer Science
